Aditya Rawal

Product Engineer - II @ MathCo | Software Engineer | Full-Stack
Development, Back-End Development, Front-End Development
Bengaluru, Karnataka, India

Summary

Hey there! I'm a results-driven full-stack developer with 3+ years of experience in building scalable, efficient, and secure web applications. I have a strong passion for developing seamless digital experiences and optimizing system performance.

My expertise lies in React.js, Node.js, and MongoDB, allowing me to create high-performance frontends and robust backends. Additionally, I'm well-versed in AWS cloud computing, including serverless architecture and microservices, helping businesses scale efficiently in the cloud.

With hands-on experience in API development, CI/CD pipelines, and Agile methodologies, I thrive in dynamic environments where problem-solving and innovation drive success. Whether it's streamlining cloud infrastructure, improving application performance, or ensuring seamless API integrations, I'm always eager to take on new challenges.

I love collaborating with cross-functional teams, writing clean and maintainable code, and staying up-to-date with the latest industry trends. My goal is to build user-centric, impactful software solutions that make a difference.

Let's connect and explore opportunities to create something amazing together! Feel free to reach out.

Experience

MathCo

Product Engineer - II
June 2025 - Present (1 year)
Bengaluru, Karnataka, India

Spearheaded the end-to-end frontend development of a high-impact analytics dashboard for Mars Inc., leveraging React.js and TypeScript to deliver dynamic, scalable, and user-centric data visualizations across multiple business units and brand categories.

Collaborated closely with data scientists and engineers to translate complex analytical models into actionable insights, enabling executive stakeholders to make data-driven decisions through intuitive UI/UX interfaces.

Contributed to the backend development using Python (FastAPI) to architect and integrate high-performance RESTful APIs, ensuring seamless data flow between analytical pipelines and the dashboard frontend.

Demonstrated strong ownership in full-stack development across projects, utilizing React, Python, Node.js, Git, and CI/CD workflows to drive delivery excellence and cross-functional collaboration

LeadSquared

Software Engineer

December 2023 - May 2025 (1 year 6 months)

Bengaluru, Karnataka, India

Designed and developed scalable, serverless microservices using Java (Spring Boot) and Node.js (Express.js), deployed via AWS Lambda and orchestrated through API Gateway—enhancing platform resilience.

Engineered secure, high-performance RESTful APIs across Java and Node.js stacks, implementing custom middleware for JWT authentication, rate limiting, and payload validation—enabling seamless, secure data exchange between microservices and frontend clients.

Built and maintained React.js UI modules using TypeScript, integrated via micro frontend architecture (including iframe-based and embedded modules), tailored for LeadSquared's CRM—boosting feature adoption across 1,000+ enterprise clients.

Integrated deeply with internal customer engagement workflows and data models, enabling real-time, role-based dynamic UI rendering via props injection, API hydration, and tenant-level configurations.

Developed robust batch processing pipelines in both Java and Python, capable of executing complex business logic and large-scale data transformations—for key enterprise workflows.

Collaborated across full-stack teams to align backend systems and frontend UIs, ensuring performance, security, and consistency in the delivery of mission-critical CRM functionalities.

DevelUp

Full Stack Developer

January 2023 - December 2023 (1 year)

Bengaluru, Karnataka, India

Architected and implemented key pages—including Home, Course, and Career sections—leveraging React Router DOM for dynamic, client-side routing and optimized navigation flow.

Designed and developed a fully interactive Resume Builder using reusable, memoized React components with state managed via React Context API and local storage for draft persistence; successfully adopted by 5,000+ users.

Built a modular, component-driven UI architecture with strict separation of concerns and atomic design principles, resulting in high reusability and maintainability.

Implemented secure JWT-based authentication workflows, including protected routes, token refreshing, and role-based access control, ensuring robust frontend security.

Developed a data-driven user dashboard utilizing conditional rendering, API-based hydration, and skeleton loaders for seamless UX—featuring job application tracking and a notification management interface.

Wrote RESTful APIs in Express.js to serve React views, implementing controller-service-repository patterns for clear separation and testability; optimized MongoDB queries for performance with indexes and aggregation pipelines where applicable.

Emphasized responsive design and accessibility using semantic HTML and modular SCSS, ensuring cross-device compatibility.

Practiced Git-based version control, code reviews, and Agile sprints to ship high-quality, production-ready features on time.

Wipro

Project Engineer Trainee

February 2022 - August 2022 (7 months)

Remote

Built an e-commerce platform using the MEAN stack, covering database schema and frontend implementation.

Developed a coupon management microservice to streamline discount processes and sales tracking.

Implemented REST API endpoints for user authentication and product management.

Education

PSIT Kanpur (Pranveer Singh Institute of Technology)

Bachelor of Technology - BTech, Computer Science · (August 2018 - July 2022)
